

Schottergrube Cava di ghiaia Gravel pit

Gottesanbeterin
Mantide religiosa
Mantis

Schmetterlingshaft
Ascalafò
Owly Sulphur

Schlupfwespe mit Beute
Vespa icneumonide con preda
Parasitic Wasp

Kreuzotter
Marasso
Crossed Viper

Bläuling
Licenide
Alcon Blue

Sandlaufkäfer
Cicindela
Tiger Beetle

Nachdem der Kiesabbau aus Rentabilitätsgründen eingestellt wurde, sollte die Grube wieder aufgefüllt werden, was bei der lokalen Bevölkerung wegen der zu erwartenden LKW-Fahrten auf großen Widerstand stieß. Dem Schicksal der Natur überlassen, erobern Pflanzen und Tiere ihren Lebensraum zurück und schaffen ein abwechslungsreiches Mosaik.

Dopo che, per motivi di scarsa redditività, le operazioni estrattive furono abbandonate, l'intenzione era di reinterrare la cava, ma il progetto incontrò forti resistenze da parte della popolazione locale che temeva un traffico eccessivo di mezzi pesanti. Restituita praticamente alla natura e in preda al suo destino, l'area dell'ex cava andò ripopolandosi di specie vegetali e animali che danno ora vita ad un variegato mosaico biologico.

After the mining of gravel was no longer profitable and the pit was shut down, plans called for the pit to be filled in. However, the local populace opposed this idea due to the expected traffic of heavy trucks that would be necessary to accomplish this. Thus, the pit was left to its own devices – and soon was recolonized by Mother Nature. Various plants and animals have moved back in and created an interesting mosaic of life.
